

MAP B-3: Access Control Classification for State Roads

Data from the FL Department of Transportation

The FDOT Access Control Classification reflects the desired access management standards to be followed in each classification. These are standards for restrictive medians, median opening separations, and driveway separation. The ranges are from 00 to 07, with 01 being the highest amount of access management control (freeways) and 07 usually found on suburban built-out corridors.
